

Protect your Internet connected device with Phillips Design's

“Stop ‘Em Dead!”

service!

Do you have an internet connected device?

If your answer is “yes”, then you NEED this service!

- Are you worried about infections on your device?
- Has your device slowed down?

- These problems can not only wreak havoc with your device and files, but can also allow others to use your device for their own purposes!
- A major cause of identity theft are trojan horse/backdoor programs stealing your financial/banking information right from your own device!

**** Phillips Design has the solution!**

Phillips Design has a service that we like to call “Stop ‘Em Dead!” This is an evolving system we’ve used on our own devices since 1988. *In all that time, we’ve never suffered from an infection of ANY kind!*

For just \$125.00, we will:

- Scan & clean your system of viruses
- Scan & clean your system of trojan horses/backdoor programs
- Scan & clean your system of RootKits
- Scan & clean your system of spyware
- Scan & clean your system of adware (a major source of spam)
- Scan & clean your system of malware
- Scan & clean your system of “browser hijackers” (a major source of both pop-ups and spam)
- Install good protection software and configure it to automatically update itself to protect you from all the new malware being written & released daily, as well as protect your email from both incoming & outgoing infections
- Install ad & spyware protection software that will protect you from these programs ever being installed to your device without your knowledge
- Install (or configure) a firewall program that will stop anyone attempting to break into your device or use your device as a “spam relay station”
- Install (or configure) a pop-up stopper & an ad blocker to ensure that you will no longer be bothered with these nuisances unless you choose to see a specific pop-up or ad

Additionally, we will:

- Reconfigure your internet browser software to take up less space for “Temp” files (a major cause of devices slowing down)
- Reconfigure your device to deny scripts that open your device to attack from viruses, trojans and spyware
- Check your device’s hard drive for weakness (indicating that it may be ready to crash) and defragment it
- Perform repairs to Window’s “Registry” file ([see below](#))

What you get:

- A clean device
- Software to protect your system now & into the future
- Less wasted space on your device, therefore more space for you to store your files
- Peace of mind!

Contact Phillips Design right now to set an appointment for us to protect your device! Our phone number is 614-764-0476, our email address is earlphillips@gmail.com. Be sure to ask about our Referral Discount program as well as our Multi-System discounts!

[Please see other side](#)

** Windows 95, 98, 2000, XP, Vista, 7, 8; Mac, eMac, iMac, Android devices.

Window's Registry is a file that can be thought of as the "brains" of all Windows operating systems. Over time, the registry accumulates errors from programs being removed improperly, from viruses, trojans and spyware, as well as just normal use. When the Registry file gets scrambled, it can dramatically slow down the operating system, as well as eventually cause your computer to crash irrevocably. This will mean that your computer will need to be rebuilt, with the likely loss of all your data files.
